MILL ON THE CYBINA RIVER | POZNAN, POLAND

The Mill on the Cybina River in Poznan, Poland, stands as a testament to the harmonious blend of historical reverence and modern architectural design. Located near the mouth of the Cybina River, where it flows from Swarzedzkie Lake, this site is steeped in history, with legends suggesting that Napoleon Bonaparte and his army rested here during their march to Moscow in the early 19th century.

In its contemporary incarnation, the Mill has been transformed into a residential complex that pays homage to its industrial past. The façade prominently features King Klinker's "Old Factory" thin brick in King size, a choice that evokes the rugged charm of 19th-century factory belts. This specific brick selection not only provides a visual connection to the site's historical industrial use but also ensures durability and aesthetic appeal.

The architectural design by Modern Construction Systems emphasizes integration with the surrounding environment. The use of "Old Factory" thin bricks complements the natural tones of the landscape, allowing the structure to blend seamlessly with its riverside setting. Large windows and thoughtfully designed communal spaces offer residents picturesque views of the Cybina River and the adjacent greenery, fostering a strong connection between the built environment and nature.

As of the latest updates, the Mill on the Cybina River has been successfully developed into a residential complex featuring 45 units, retail spaces, and off-street parking. The project has been well-received for its thoughtful design and sensitive adaptation of a historically significant site.
