CHRISTIE CROSSING | CALGARY, ALBERTA, CANADA

Carefully crafted to honor the needs and desires of the locals, Christie Crossing was designed with a clear vision: to seamlessly blend into the surrounding neighborhood while preserving its unique character. The architects at S2 Architecture and developers at Dominion understood the importance of balancing modern innovation with respect for Calgary's rich heritage.

The result is a stunning fusion of modern and traditional design, where sleek architecture complements the area's established aesthetic. With Obsidian Shadow thin brick in American Imperial size, the development pays homage to the local architectural heritage while offering state-of-the-art amenities.

More than just a development, Christie Crossing fosters a sense of community and belonging. Its communal spaces encourage neighbors to connect and engage, creating a vibrant and inclusive atmosphere that embodies the spirit of the area.

This harmonious integration of design, heritage, and community earned Christie Crossing an Alberta Masonry Design Award in 2024, a testament to its exceptional quality and enduring impact.
